Venus Legacy™

A Full Body & Face Advanced
Solution for Wrinkles, Cellulite,
and Skin Tightening

Wrinkle Reduction

Cellulite Reduction

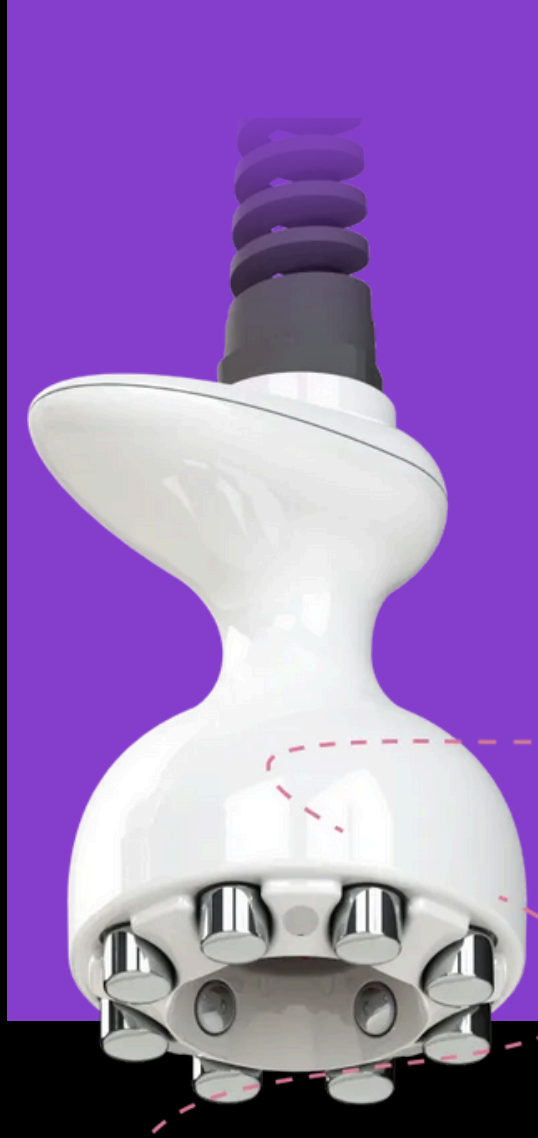

Skin Tightening

The Venus Legacy™ is a highly advanced non-invasive medical device that effectively resolves face and body aesthetic needs, such as non-surgical circumferential reduction, cellulite reduction, skin tightening, and wrinkle reduction. Treatments are comfortable with no downtime and are safe for all skin types. Venus Legacy™ functions as a radio frequency machine for cellulite and is powered by proprietary (MP)2 technology (a combination of Multi-Polar Radio Frequency and Pulsed Electro Magnetic Fields) and features cutting-edge VariPulse™ technology. Patient demand for these types of treatments was expected to grow by 30% by the end of 2023.¹

4D BODY APPLICATOR

**Built for the efficient
treatment of large
areas**

Multi-dimensional RF and PEMF energy matrix can target specific treatment areas from multiple directions and positions to effectively induce cellulite reduction and tighten lax skin

4D FACE APPLICATOR

Facial treatments and hard-to-reach areas

Designed to treat smaller areas of the body like hard to reach and smaller areas. Using similar technology as the 4D Body applicator, but in a smaller configuration.

TECHNOLOGY

The Synergistic Effect of Multi-Polar RF and PEMF

Multi-Polar RF uses a complex algorithm to deliver homogeneous energy and volumetric heating to multiple tissue depths, allowing for quick and safe buildup of heat, and easy maintenance of therapeutic temperature throughout the treatment

Pulsed-Electro Magnetic Fields

Through synergistic (MP)², RF heats and directly stimulates fibroblasts, while PEMF is known to promote angiogenesis and induce fibroblast proliferation through release of the growth factor FGF-2, resulting in increased collagen synthesis²

(MP)² Technology

Effect of Multi-Polar RF is enhanced by Pulsed Electro Magnetic Fields (PEMF), a non-thermal mechanism emitted through the applicator's electrodes

VariPulse™ Technology

The only medical aesthetic device in the industry with advanced VariPulse™ (integrated in the 4D Body and 4D Face applicators)
Provides adjustable pulsed suction (positive and negative air pressure) that facilitates effective lipolysis and deeper energy penetration
Increases blood circulation, stimulates lymphatic drainage, and enhances the lipolysis effect of RF energy, reducing the appearance of cellulite and leading to circumferential reduction
Smooth movement of VariPulse™ provides a more comfortable treatment for the patient

Real-Time Thermal Feedback

All four Venus Legacy™ applicators are equipped with integrated sensors that provide real-time thermal feedback to allow for easy, immediate, and continuous detection of skin temperature profile
Enhances patient safety and comfort, and can lead to more consistent and predictable clinical outcomes
Makes Venus Legacy™ very intuitive and therefore highly delegable.

Return on Investment:

Venus Legacy™ includes various features that enable a higher return on ownership, cutting-edge technology for all skin types, and no consumables. Working with Venus Concept's Practice Development team will help to maximize the profitability of your device.
