

HUB srl is pleased to announce:

Contact Lens Specialty Clinic

The Specialty Contact Lens clinic sees patients of all ages and uses the most advanced equipment and lens designs

Services Offered

Specialty contact lenses can help restore vision to persons affected by a large range of ocular disorders

• keratoconus	• Stevens-Johnsons syndrome
• post-corneal transplant	• presbyopia
• refractive surgery with complications	• high astigmatism/myopia/hyperopia
• post cataract surgery complications	• orthokeratology for myopia control
• corneal trauma or scarring	• cosmetic/prosthetic contact lenses
• Sgögren syndrome / severe dry eye	• nystagmus

Children and infants may also exhibit visual conditions that require a specialty contact lens to allow normal development of their vision system (aphakia, aniridia, amblyopia, albinism)

Large range of contact lenses available

- rigid gas-permeable
- prosthetic
- mini-scleral / scleral
- soft (also for keratoconus, post-corneal transplants and refractive surgery)
