

Speciality contact lens clinic

Since May 2025, HUB s.r.l. has been offering Specialty Contact Lens services, an optometric discipline popular in the United States that achieves the correction of optical defects through the use of contact lenses of different diameters, both soft and rigid gas permeable, for the purpose of improving visual quality particularly in keratoconus-irregular cornea, post-trauma, post-surgery eye, high astigmatism, and dry eyes. Specialty Contact Lens services also provide contact lenses for myopia control.

Dr. Timothy Albert offers optometric care for all ages, including early childhood. He specializes in fitting keratoconus-specific, post-corneal transplant, post-trauma and pediatric contact lenses, as well as orthokeratology.

He is the former director of the Optometry clinic at the U.S. Army Health Clinic, Camp Darby, Livorno, Italy, International Head of Navy Reserve Optometry (2007-2011), consultant for specialty contact lens fitting at the U.S. Navy hospital in Naples, NA.

Dr Albert was a member of the research group on "Dry Eye and Irregular Cornea" at the Department of Ophthalmology, University of Pisa (Cisanello Hospital, primary Professor Marco Nardi) and was responsible for the Specialty Contact Lens Department at the University of Pisa hospital and has co-authored books and published numerous scientific articles in this field.
